DETAILED ACTION

Allowable Subject Matter

1. Claims 2-8, 12-14 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:
The art of record does not suggest the respective claim combinations together and the respective claim combinations are not obvious:

As per independent claim 2: A semiconductor device has a cooling system for controlling temperature of a refrigerant through a heating section and a radiator, the semiconductor device being connected to and cooled by said cooling system. The apparatus distinguishes over prior art references especially for the following points: Wherein a variation width of temperature controlled by said cooling system through said heating section and said radiator is smaller than a temperature variation of the refrigerant caused by variations in operating conditions of said semiconductor device; and further suppression means is provided to cover an outer periphery of said semiconductor device and suppressing transmission of heat from an ambient atmosphere to said semiconductor device.

As per independent claim 12: A vehicular power conversion unit mounted in a vehicle comprising an internal combustion engine and a motor, said vehicular power conversion unit converting power supplied from a battery and controlling driving of said motor, said vehicular power conversion unit being disposed, upstream of the internal combustion engine, cooled by a cooling system which cools said internal combustion engine by a refrigerant cooled by a cooling unit. The apparatus distinguishes over prior art references especially for the following points:

The vehicular power conversion unit is able to suppress heat transmission from the exterior such that a temperature variation width of the refrigerant depending on variations in operating conditions of at least said power conversion circuit module is larger than a variation width of temperature of the refrigerant controlled through said internal combustion engine and said cooling unit and wherein said cooling channel is formed in said casing, and a heat insulating layer is formed in said casing by the refrigerant flowing through said cooling channel, thereby suppressing heat transmission from the exterior.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

USPN 6,834,511 to Hatakeyama discloses a vehicle air conditioning apparatus;

USPN 6,584,796 to Itoh discloses a heat pump cycle having internal heat exchanger;

USPN 6,237,351 to Itoh discloses a heat pump type refrigerant cycle system.
